Installation Procedure

1. Excavate foundation holes as shown on sheet 2. When installing into loose surfaces such as sand install the unit 100mm lower into the ground to allow for surfacing loss over time.
2. Assemble the two "H" Frames by connecting posts "A" to crossbeam "B". The assembly should be connected as shown in detail view 1.
3. Position each end assembly into the foundation holes and attach Hand Rails "C" using Coach screws as shown on detail view 2, ensuring to drill a 6mm pilot hole before-hand. Attach Bridge Rope by pushing Eyebolts through the holes in the posts and the inserts up through the steelwork. Check the unit is level and the posts are plumb and square using diagonal measurement as shown on sheet 2.
4. Add concrete around posts, the top of the concrete should be 100mm below the finished surface level and should slope away from posts as shown. See drawing sheet 2.
5. Leave the concrete to set for 48 Hours. If the equipment is likely to be used during this time remove the Bridge Rope from the posts and re attach the following day.
6. Sand and rough edges or surfaces and treat with preservative if necessary.
7. Check and tighten all fixings and install protective caps once checked.
8. This unit must be maintained in accordance with our inspection and maintenance schedule and BS1176 part 7.
